File manager for Microsoft MakeCode programs in EV3

Instructions:

- Drop this PDF file on your EV3 drive (it has UF2 tucked at the end).
- Run “File_manager” on the brick.
- Use “Enter” key to mark files for deletion.
- Select “Delete N file(s)” to delete them; you will need to press “Enter” twice.
- The files might still appear in the file lists, but they are gone. They should go away when you switch menus left/right or when you try to run them.

Happy coding!
